

VideoDynamics, Inc.

Video Dynamics, Inc. (VDI) is a full-service systems integrator providing Audio Visual (AV) design and engineering services to meet current and future requirements within the secure and open communications environments.

VDI is an expert AV services company within the Intelligence Community. Designing for Command, Control, Communications and Computers (C4) Systems supporting warfighter initiatives and directives.

VDI has worked within the National Capital Region (NCR) for over 40 years providing AV engineering design and installation services to commercial and federal customers.

Our design philosophy starts with the end user experience. We design each system with ease of use in mind, where User Interfaces (UI) use minimal button pushes to automate system functions. All systems are designed using today's technology while ensuring growth for tomorrow's challenges. VDI's close relationships with preferred manufacturers allows our design team to stay on top of emerging technologies as well as request technology enhancements based on end user needs.

Our installation philosophy centers around cleanliness, using quality equipment and components, cables and connectors. We pay special attention to ensuring end customers' requirements are met with as little impact on the customer facilities as possible. All installations are performed in accordance with safety and building codes.

VDI has experience installing systems in secure facilities and understands the limitations that come with that. We provide installation techniques that meet accreditation requirements.

VDI understands the current global supply chain restrictions and performs risk management to ensure both the security of components as well as the availability of resources.

VDI Provides Services in the Following Areas:

- Video Teleconferencing (VTC)
Fully integrated, single or multi-classification VTC suites, conference centers and auditoriums.
- Streaming Video
Closed network and enterprise wide IP video systems. From IPTV streaming to corporate distributed communications.
- Broadcast / Production
Broadcast studios, control rooms, edit suites and integrated workflow solutions. Live production support
- Television Headend and Distribution
RF and IP based TV headend systems. Sourced from either commercial or satellite providers. Distributed as RF, IP or hybrid
- Audio/Video/RF and IP Distribution
Connected room, content sharing, asset sharing. Closed or enterprise wide solutions.
- Room Monitoring, Record and Playback
Training facilities, Exam room Monitoring, Interview and Polygraph rooms. Monitoring and recording with custom metadata tagging applied to recorded video.
- Closed-Circuit Television (CCTV)
CCTV cameras for facility and space monitoring and security. Networked Video Recording systems for investigative and historical reference.

VDI currently provides the following services:

- Requirements Gathering
Technology discussions and recommendations
- System Design and Engineering
Including specifications and facility layout
- Project Management
From initial requirements gathering to the final systems test, acceptance and turnover
- Equipment Acquisition
Direct from OEM or Authorized Distributors
- System Installation, Integration and Testing
Industry compliant installation, equipment integration and full system Test and Acceptance planning
- System documentation
Full system wiring schematics, equipment installation notes, asset identification and system configuration details
- Operations and Maintenance
System operators and tiered maintenance support
- Administrator and End User Training
- Custom Controls / Programming
Simple and easy to use; user specific control interfaces
- Broadcast Engineering Support
Broadcast systems design and integration, Pre and Post production support
- Life Cycle Management
System design, installation, maintenance, repairs, warranty tracking and replacement recommendations
